## A sum of skills

WEREYSTENGER® is the result of a merger between two existing companies, Werey and Stenger. On joining forces in 2001, each brought to the mix several generations of know-how as plaster specialists. WEREYSTENGER® thus combines tradition and new technologies, while mastering classicism, design and contemporary architecture.

Fibrous plaster and stucco, plasterboard, fire protection, acoustic and thermal treatments in buildings, creation of all architectural designs... WEREYSTENGER® offers all types of «plaster solutions» from «low energy consumption» insulation to work on the biggest public and private building sites.

In the following pages, you will find a few examples of our work in our own region, in France and abroad.

Christian WEREY  
Master Plasterer, Founder of  
WEREYSTENGER®

THE LUXEMBOURG PHILHARMONIC  
Architect : Christian DE PONTZAMPARD

## Skilled workmanship in all plaster and insulation trades

Plaster is a noble material, able to meet the interior architecture and decoration needs of any building.

Plaster is also an element of comfort in buildings, thanks to its role as a hygrometric regulator and as an unavoidable component in all thermal insulation, soundproofing and fire protection systems.

**Our experience enables us to meet all the plaster requirements on a building site, regardless of size and constraints.**

DEXIA BANQUE INTERNATIONALE  
IN LUXEMBOURG  
Architect - Claude VASCONI

## Fibrous plaster: an endless source of creativity

### Classic or decorated fibrous plaster

All types of ornaments such as cornices, ceiling roses, columns, mouldings... We have at our disposal an inestimable cultural heritage in the form of a huge collection of models and moulds covering all styles (over 2000 references).

### Contemporary fibrous plaster

Creation of features in all shapes and volumes, including ceilings, grooves for indirect lighting, acoustic correction...

### Glass reinforced gypsum (GRG)

This new technique is a lighter and stronger solution installed using screws. Thanks to GRG, very large features can be installed with no technical difficulties.

## Stucco: from stone to marble to Marmorino

Walls, pilasters, columns, entrance hall decorations, stair stringboards reproducing all desired shade and effect.

### Restoration of heritage buildings

Fibrous plaster, stucco and gypsum are all used in the restoration of listed and unlisted heritage buildings: churches, theatres, private residences or public buildings...

GENERAL COUNCIL OF HAUT-RHIN (ALSACE)  
Architect - Adrien FANSILBER & ASSOCIES

### Dry plasterwork and insulation

All types of partitions and suspended ceilings, thermal insulation, low consumption buildings, insulation and acoustic correction, removable false ceilings: fibre, metal, board. Constructions with high, anti-break-in or fire-resistant partitions.

### Acoustic works and fire protection

- Acoustic correction of ceilings and walls ... with a perfectly smooth, seamless appearance (BASWAphon)
- All types of soundproofing insulation
- Dry and projected plaster fire protection systems
